

EVN

HyperLogistics

EVN delivers safety-compliant, explainable AI rerouting for middle-mile logistics.

01 The Problem

Middle-mile teams face immense pressure during disruptions. Without trustworthy AI, prediction cannot safely cross the gap into action

Prediction

Helvetica Now Display

7.7M

US accident records.

Multi-TB NOAA
weather data feeds.

Current tools detect risk in real-time but
leave operators stranded with raw data.

The Prediction-to-
Action Gap

Action

Helvetica Now Display

Safe, explainable, and compliant
reroutes ready for dispatch.

02 Our Solution

Safety-Compliant • Explainable AI • Middle-Mile

HyperLogistics combines forecasting, retrieval, and hard safety veto into one decision flow.

1

RETRIEVE

ReMindRAG retrieves grounded evidence for route reasoning — no free-form generation.

2

FORECAST

SRSNet predicts disruption propagation over 4–8 hour middle-mile transit windows.

3

SAFETY VETO

Symbolic bridge-constraint veto blocks unsafe recommendations before dispatch.

Safety layer enforces 100% PHYSICAL CONSTRAINT COMPLIANCE through bridge clearance and load checks

02 Our Solution

Safety-Compliant • Explainable AI • Middle-Mile

HyperLogistics combines forecasting, retrieval, and hard safety veto into one decision flow.

03 Product & Technology

Snowflake-native architecture operationalizes explainable rerouting in production form.

Medallion data pipeline (Bronze/Silver/Gold) supports ingestion, preprocessing, and serving.

Core stack: ReMindRAG + SRSNet + Snowflake Cortex + Spatial SQL guardrails.

Forecasting configured for 4-8 hour middle-mile transit windows.

Streamlit app surfaces risk heatmaps, side-by-side route options, and rationale.

03 Product & Technology

Safety-Compliant • Explainable AI • Middle-Mile

Only EVN Hyperlogistics possesses the Deterministic Safety Veto required to make AI outputs physically and legally viable for freight

04 Target Customer

Safety-Compliant • Explainable AI • Middle-Mile

Built for middle-mile decision owners at carriers and 3PLs.

Logistics Network Manager

Strategic Route Owner

- Disruption triage
- Reroute approval
- Network-wide compliance
- Cost control under pressure

Area Manager

Operational Executor

- On-time performance
- Local route execution
- Driver safety oversight
- Compliance confirmation

Week 8: 100 Area Manager query-response pairs trained and validated on operational language

05 Market Opportunity

A \$110B market growing toward \$218B — underserved by compliance-aware AI.

TAM

Middle-Mile Logistics

\$110B

Global Market (2025)

7% CAGR → \$218B by 2035

All carriers, 3PLs, and freight operators managing hub-to-hub and distribution-center routing decisions globally.

Source: ResearchAndMarkets / 360iResearch

SAM

Route Optimization Software

\$7.9B

Global Market (2025)

13.3% CAGR → \$16.8B by 2031

Carriers and 3PLs actively purchasing route intelligence software — the direct buyer segment for explainable AI rerouting.

Source: Mordor Intelligence

SOM

Explainable AI in Logistics

\$1.7B

Generative AI Logistics (2025)

33.7% CAGR → \$31.7B by 2035

Early-stage but fastest growing segment: AI systems that explain decisions and enforce hard compliance — EVN's exact position.

Source: Future Market Insights

EVN targets the SAM/SOM intersection: compliance-enforcing, explainable AI for active freight operations.

06 Progress & Traction

Safety-Compliant • Explainable AI • Middle-Mile

Working deployment evidence, measurable lift, and reproducible execution.

Model Lift

Accuracy Lift

Domain adaptation improved accuracy from 40% to 95%.

Reproducibility

Audit Pass

ReMindRAG reproducibility audit passed perfectly, with 14/14 identified issues resolved.

Deployment

Safety Enforcement

Live HyperLogistics deployment actively rejecting physically invalid routes.

Adaptation Proof

Domain-adapted model: 40% baseline → 95% evaluation metrics.

Eval Quality

17/17 automated tests pass, 14/14 issues closed — ReMindRAG reproducibility audit.

Live Deployment

HyperLogistics Streamlit app deployed and available — not a notebook demo.

07 Business Model

Safety-Compliant • Explainable AI • Middle-Mile

Enterprise SaaS licensing with implementation and analytics expansion.

08 Our Team

Safety-Compliant • Explainable AI • Middle-Mile

EVN combines data engineering, modeling, and product delivery ownership.

Joel Vinas

Internal data engineering
Ingestion pipelines
Preprocessing architecture

Bronze/Silver/Gold Medallion Pipeline

Daniel Evans

External weather integration
App delivery & UI
Evaluation support

Streamlit App + NOAA Integration

Tony Nguyen

Automation architecture
S3/Snowflake orchestration
Reproducibility controls

ReMindRAG Repo Audit 17/17

Balanced contribution: 33.3% each • Full-stack coverage: Ingestion to Deployment to Compliance

09 Next Steps & Vision

Complete evaluation hardening, enterprise controls, and rollout scaling.

PHASE 1 HARDENING

Finalize metamorphic eval
Lock benchmark reporting
Close all test items
15 queries + 5 metamorphic pairs

1

PHASE 2 ENTERPRISE

Scale beyond 100 examples
OAuth + RBAC controls
Enterprise workflow fit
Expand deployment footprint

2

PHASE 3 ROLLOUT

Production fleet onboarding
Broaden carrier partnerships
EVN as default rerouting layer
Middle-mile industry standard

3
